To develop a web application with a structure from one of the previous tasks - of Online shop.

In the application next models should exist:

- Buyer / Customer
- Seller
- Product (that could be sold)
- Order
- Cart
- Comment from Buyer for Product

Student has to use different kind of Model Relationships.

Student also has to write some queries using LINQ:

- Orders made by some Buyer
- All products where a Buyer has left at least one comment (unique products without duplicates)
